

Git - 소스 코드 관리

GitHub

깃허브(Git Hurb)

■ 깃허브란?

분산 버전 관리 툴인 깃 저장소 호스팅을 지원하는 웹 서비스이다.
깃을 창시한 사람은 리눅스를 만든 리누즈 토발즈이고, 깃허브를
인수하여운영하는 곳은 마이크로소프트(MS)사이다.

■ 깃허브 환경 구축

1. 깃 소프트웨어 설치(git-scm.com)
2. 깃허브 가입(github.com) 및 원격 저장소 생성
3. 명령 프롬프트 사용(CLI 프로그램)

Repository(저장소) 만들기

The screenshot shows the GitHub 'Create your first project' page. At the top is a search bar with the GitHub logo and the text 'Search or jump to...'. Below this, the heading 'Create your first project' is followed by the text 'Ready to start building? Create a repository for a new idea or bring over an existing repository to keep contributing to it.' A green 'Create repository' button is prominently displayed, with a red circle and the Korean text '클릭' (click) next to it. Below the button is a link that says 'Import repository'. At the bottom, there is a section titled 'Recent activity' with the text 'When you take actions across GitHub, we'll provide links to that activity here.'

The screenshot shows the repository creation form on GitHub. The 'Owner' field is set to 'sugu2000kr'. The 'Repository name' field is set to 'gitTest', which is marked with a green checkmark. A red circle with the number '2' and the Korean text '저장소 이름 만들기' (create repository name) is placed over the repository name field. Below the name field, there is a text prompt: 'Great repository names are short and memorable. Need inspiration? How about [stunning-fortnight?](#)'. The 'Description (optional)' field contains the text '깃 테스트'. The 'Visibility' section shows 'Public' selected, with a subtext: 'Anyone on the internet can see this repository. You choose who can commit.'

Quick setup — if you've done this kind of thing before

[Set up in Desktop](#) or [HTTPS](#) [SSH](#) <https://github.com/sugu2000kr/gitTest.git>

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository in

...or create a new repository on the command line

```
echo "# gitTest" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/sugu2000kr/gitTest.git
git push -u origin main
```

명령 프롬프트 사용

■ 깃허브 사용 툴 - 명령 프롬프트

* 윈도우 - 검색 - cmd - 명령 프롬프트

C:\>git

C:\>git -version

* 사용자 확인

C:\>git config user.name

```
C:\Users\김기용>git
usage: git [--version] [--help] [-C <path>] [-c <name>=<value>]
        [--exec-path[=<path>]] [--html-path] [--man-path] [--info-path]
        [-p | --paginate | -P | --no-pager] [--no-replace-objects] [--bare]
        [--git-dir=<path>] [--work-tree=<path>] [--namespace=<name>]
        <command> [<args>]

These are common Git commands used in various situations:

start a working area (see also: git help tutorial)
  clone             Clone a repository into a new directory
  init              Create an empty Git repository or reinitialize an existing one

work on the current change (see also: git help everyday)
  add               Add file contents to the index
  mv                Move or rename a file, a directory, or a symlink
  restore           Restore working tree files
  rm                Remove files from the working tree and from the index
  sparse-checkout   Initialize and modify the sparse-checkout

examine the history and state (see also: git help revisions)
  bisect            Use binary search to find the commit that introduced a bug
  diff              Show changes between commits, commit and working tree, etc
  grep              Print lines matching a pattern
  log               Show commit logs
  show              Show various types of objects
  status            Show the working tree status
```

깃 계정 이름 변경

■ 계정 이름 변경하기

Settings > 변경할 이름 > Rename

The screenshot shows the GitHub Settings page. At the top, there is a navigation bar with icons and labels for 'Projects', 'Wiki', 'Security', 'Insights', and 'Settings'. The 'Settings' tab is selected and highlighted with a red underline. Below the navigation bar, the page title 'Settings' is displayed. Underneath, the 'Repository name' section is visible, featuring a text input field containing 'pybo2' and a 'Rename' button to its right. Below this, there is a checkbox labeled 'Template repository' which is currently unchecked. A descriptive text below the checkbox states: 'Template repositories let users generate new repositories with the same directory structure'.
